

Municipality Success Story

Brainerd Public Utilities (Minnesota) became a customer of mPower in January 2016. BPU started with GPS Collection Training by mPower. Brainerd had good mapping and attribute information in ArcMap but wanted to do an internal GPS inventory of their Water and Electric features. mPower gave them the ability to distribute their newly enhanced maps to the field personnel along with the ability to edit features during maintenance, manage planned outages, speed up meter change outs, and better document and plan future projects.

BPU was so satisfied with their new products that at the beginning of 2018 they elected to upgrade to mPower's advanced Work Order Management Solution. BPU stands out as one of our best ESRI full enterprise deployments.
